### A. Amendments to the claims:

1. (original) A method for producing a dendrimer having a structural repeating unit which is represented by formula (1) and which contains a linear portion including a thienylene moiety and a branch portion Y formed of an optionally substituted trivalent organic group, the method being based on the convergent method, characterized in that the method comprises reaction step 1 of converting  $\alpha$ -position hydrogen of the thiophene ring of a thienylene-moiety-containing compound (a) for forming end moieties to an active group  $V_1$ -which undergoes Suzuki cross-coupling reaction, to thereby form compound (b); reaction step 2 of subjecting a compound (c) to Suzuki cross-coupling reaction with the compound (b) to thereby yield compound (d), the compound (c) having a linear portion and a branch portion Y and having, at the branch portion Y, two active groups  $V_2$  which undergo Suzuki cross-coupling reaction with the active group  $V_1$  reaction step 3 of converting  $\alpha$ -position hydrogen of the thiophene ring of the thus-formed compound to an active group  $V_1$  which undergoes Suzuki cross-coupling reaction, and reacting the compound (c) with the active group  $V_2$ , to thereby form a dendron of a subsequent generation; and a step of repeating the reaction step 3 in accordance with needs, to thereby form a dendrimer:

$$R_1$$
  $R_2$   $Z$   $(1)$ 

$$\begin{array}{c|c} H & S & Z & Y_1 & W \\ \hline R_1 & R_2 & (a) \end{array}$$

$$R_1$$
  $R_2$   $V_2$   $V_2$   $C_2$   $C_2$ 

(wherein Z represents a single bond or an optionally substituted divalent organic group having no active group; each of  $R_1$  and  $R_2$  is selected from among a hydrogen atom, an alkyl group, and an alkoxy group; Y represents an optionally substituted trivalent organic group;  $Y_1$  is identical to Y or represents an organic group having a skeleton identical to that of Y; W may be absent or represents an optionally substituted monovalent organic group having no active group; m is an integer of 0 or more; and each of  $V_1$  and  $V_2$  serving as active groups is selected from active groups which undergo Suzuki cross-coupling reaction,  $V_1$  and  $V_2$  being able to be mutually cross-coupled)

2.(original) A method for producing a dendrimer according to claim 1, wherein the active group  $V_1$  is selected from the following group 1 and the active group  $V_2$  is selected from the following group 2.

## Group 1

$$-B(OH)_{2}$$

$$-B(OR)_{2}$$

$$-CH_{3}$$

$$-CH_{3}$$

$$CH_{3}$$

R = methyl, ethyl, isopropyl, or butyl

Group 2

Cl, Br, I,  $OSO_2(C_kF_2k+1)$ 

K=1 to 4

3. (original) A method for producing a dendrimer according to claim 1, wherein the active group  $V_1$  is selected from the following group 3 and the active group  $V_2$  is selected from the following group 4.

Group 3

Cl, Br, I

Group 4

 $-B(OH)_2$ 

 $-B(OR)_2$ 

R = methyl, ethyl, isopropyl, or butyl

- 4. (currently amended) A method for producing a dendrimer according to any of elaims 1 to 3 claim 1, wherein, in the case where a compound used in the Suzuki cross-coupling reaction is a thiophene organic boron compound containing boron, the thiophene organic boron compound is gradually added in a continuous or intermittent manner to a reaction system containing the other counterpart compound, thereby performing Suzuki cross-coupling reaction.
- 5. (currently amended) A method for producing a denrimer according to any of elaims 1 to 4 claim 1, which further includes a reaction step of converting  $\alpha$ -position

hydrogen of the thiophene ring of a compound (e) produced through singly or repeatedly carrying out the reaction step 3 to an active group  $V_1$ , to thereby form a compound (f); and a reaction step of reacting the compound (f) with a compound (g) having  $Y_2$  serving as a core, to thereby form a compound represented by formula (2):

$$V_{1} = \begin{bmatrix} S & Z & Y_{1} & W \end{bmatrix}_{m}$$

$$V_{1} = \begin{bmatrix} S & Z & Y_{1} & W \end{bmatrix}_{m}$$

$$K_{1} = \begin{bmatrix} S & Z & Y_{1} & W \end{bmatrix}_{m}$$

$$K_{1} = \begin{bmatrix} K_{2} & K_{2} & W \end{bmatrix}_{m}$$

$$K_{1} = \begin{bmatrix} K_{2} & K_{2} & W \end{bmatrix}_{m}$$

$$Y_2 - \left\{V_2\right\}_{\Gamma} \qquad (g)$$

(wherein Y<sub>2</sub> represents an r-valent organic group, and r is an integer of 1 or more)

6. (original) A compound serving as a building block employed in a method for producing a dendrimer on the basis of a convergent method, the dendrimer having a structural repeating unit including a thienylene moiety, characterized in that the compound is represented by formula (I-1)

$$\begin{array}{c|c}
 & V_3 \\
 & R_3 & R_4 \\
\end{array}$$
(I-1)

(wherein p is an integer of 1 to 10; each of  $R_3$  and  $R_4$  is selected from among a hydrogen atom, an alkyl group, and an alkoxy group; when p is 2 to 10,  $R_3$  and  $R_4$  in each thienylene structural repeating unit may be different from each other; and  $V_3$  is selected from the following group 5)

Group 5

$$Cl$$
,  $Br$ ,  $I$ ,  $OSO_2(C_kF_2k+1)$ 

$$K=1$$
 to 4

 $-B(OH)_2$ 

$$-B(OR)_2$$

R=methyl, ethyl, isopropyl, or butyl

# 7. (original) A compound characterized by being represented by formula (I-2):

H
$$R_7$$
 $R_8$ 
 $R_7$ 
 $R_8$ 
 $R_7$ 
 $R_8$ 
 $R_7$ 
 $R_8$ 
 $R_9$ 
 $R_{10}$ 
 $R_{10}$ 

(wherein each of  $S_1$  to  $S_3$ , which may be identical to or different from each other, is an integer of 1 to 10; each of  $R_5$  to  $R_{10}$  is selected from among a hydrogen atom, an alkyl group, and an alkoxy group, and  $R_5$  to  $R_{10}$  in each thienylene structural repreating unit may be different from one another; and  $V_4$  is selected from the following group 6)

Group 6

Cl, Br, I

 $-B(OH)_2$ 

 $-B(OR)_2$ 

R=methyl, ethyl, isopropyl, or butyl

8. (original) A compound characterized by being represented by formula (I-3):

$$V_5$$
 $R_{11}$ 
 $R_{12}$ 
 $Q$ 
 $N$ 
 $(I-3)$ 

(wherein each of q is an integer of 1 to 10; when q is 2 to 10,  $R_{11}$  and  $R_{12}$  in each thienylene repeating unit may be different from each other; and  $V_5$  is selected from the following group 7)

### Group 7

H, Cl, Br, I

 $-B(OH)_2$ 

 $-B(OR)_2$ 

R = methyl, ethyl, isopropyl, or butyl

- 9. (original) A method for producing a thiophene compound comprising performing Suzuki cross-coupling reaction between a thiophene organic boron compound and a reactive compound, to thereby form a thiophene compound, characterized in that the thiophene organic boron compound is gradually added in a continuous or intermittent manner to a reaction system containing the reactive compound, thereby performing Suzuki cross-coupling reaction.
- 10. (original) A method for producing a thiophene compound according to claim 9, wherein the thiophene organic boron compound has an active group V<sub>6</sub> selected from the following group 1 and the reactive compound has an active group V<sub>7</sub> selected from the following group 2.

### Group 1

$$\begin{array}{c} CH_{3} \\ -B(OH)_{2} \\ -B(OR)_{2} \end{array}$$
 
$$\begin{array}{c} CH_{3} \\ OH_{3} \\ OH_{3} \end{array}$$

R = methyl, ethyl, isopropyl, or butyl

Group 2

Cl, Br, I, 0S0<sub>2</sub>(CkF<sub>2</sub>k+l)

K = 1 to 4
